CUTTER DISC

Inline Service's Cutter Disc is designed for enhanced cleaning of pipelines where wax, scale or sludge is present. The angled shaped surface bearing edges of the disc act as cutter blades to scrape off deposits throughout the pipeline. The spaces in-between the cutter edges allow bypass of product to help suspend removed debris.

The Cutter Disc can be used on any mandrel pig and is available for all pipe diameters. This disc is made from Inline's MAXITHANE™, a high performance urethane material, which makes this product very durable.

GUIDE DISC

Inline Service's Guide Disc is used to help push the pig through the pipeline. It is designed to be attached on the end of a mandrel bodied pig.

The Guide Disc can be configured for any mandrel pig and is available for all pipe diameters. This disc is made from Inline's MAXITHANE™, a high performance urethane material, which makes this product very durable.

SEAL DISC

Inline Service's Seal Disc is used as a sealant to align the O.D. of the pig with the I.D. of the pipeline. This disc helps to scrape out unwanted material.

The Seal Disc can be used on any mandrel pig and is available for all pipe diameters. This disc is made from Inline's MAXITHANE™, a high performance urethane material, which makes this product very durable.

SPACER DISC

Inline Service's Spacer Disc is designed to space out the urethane parts in order to allow the urethane to flex as it moves through the pipe.

The Spacer Disc can be used on any mandrel pig and is available for all pipe diameters. This disc is made from Inline's MAXITHANE™, a high performance urethane material, which makes this product very durable.

DC CUP

Inline Service's DC Cup is designed for maximum scraping. The cup is ideal for removing paraffin, asphaltines, black powder and other substances that adhere to the pipe wall.

Superior load bearing and sealing characteristics make them ideal for removing liquids from pipelines and separating dissimilar products.

CONICAL CUP

The Conical Cup is designed similar to that of the DC Cup, but with a different bolt hole pattern. It is designed for maximum scraping. They are ideal for removing paraffin, asphaltines, black powder and other substances that adhere to the pipe wall.

Superior load bearing and sealing characteristics make them ideal for removing liquids from pipelines and separating dissimilar products.

HZ BRUSH

The HZ Brush Assembly has a spring design making it ideal for aggressive cleaning. The spring is mounted in two locations on the pig providing extra support and maintaining pressure on the pipe wall. This brush is used on steel mandrel pigs and can be ran bidirectionally. Different type brushes are available for the HZ Brush Assembly.

FLAT WIRE RING BRUSH

The flat wire ring brush has a complete circular design allowing for complete coverage against the pipeline wall. This brush can be mounted to any of our mandrel bodied pigs making them into brush pigs for a more aggressive cleaning. The bristles can be made of carbon or stainless steel, flat or round wire depending on the type of cleaning job.

WRAP BRUSH

The Wrap Brush can easily be added to any urethane or steel mandrel bodied pig. The frame gets clamped together and bolted for a secure hold. When used on a pipeline pig this brush gives complete coverage of the pipe's wall. Options for the wires include carbon steel, stainless steel, prostran and pencil brush.

PIT CLEANING™ BRUSH

The pit cleaning™ brush is used for aggressive jobs, such as pit cleaning, where rust and debris are heavily built up. This brush can be added to any mandrel body pig for heavy duty cleaning. Each brush is made of multiple brush fibers that are flexible enough to get into the smallest of pits; however, they are strong enough to scrape off hard build up inside a pipe. Adding these brushes to a pig will ensure that there is increased cleaning coverage.
