

Inline's Uni Pig is available in a variety of configurations. Uni Pigs provide the flexibility of cast urethane pigs and security of one piece construction with no small parts. For aggressive cleaning simply add brushes. Available with transmitter cavity. Available in complete size range.

### UNI-FLEX PIG

Uni-Flex is designed for aggressive liquid removal. Its multi sealing disc design is highly effective in removing liquids from wet gas and product pipelines.

In crude oil lines, it can be used to control paraffin wax build-up if used on a regular basis. Other applications include batching multiple products in a pipeline, product recovery and evacuation.

### UNI-CUP PIG

The Uni-Cup Pig is used where more flexibility is required such as pipelines with varying wall thickness, low flow or low pressure applications. The cups design provides a good flexible seal.

It is very effective in removing liquids from wet gas systems, water from product pipelines and product separation and evacuation.

### UNI-PLUS II PIG

The cup and disc combination has the advantage of flexible sealing ability combined with the superior scraping capability of discs, all-in-one piece construction. The discs are thicker where they connect to the body to ensure a strong base keeps the discs from iconing. The cup-disc combination provides greater wear characteristics.

Ideal for removing liquids from high pressure, wet gas systems, black powder from natural gas lines, controlling paraffin build-up, product evacuation and separation.
